

Constraint Modelling and Reformulation

Ian Miguel and Steve Prestwich (Eds.)

5th International Workshop
Nantes, France, 25th September, 2006
Proceedings

Held in conjunction with the
Twelfth International Conference on
Principles and Practice of
Constraint Programming (CP 2006)

Foreword

Many organisations have scheduling, assignment, supply chain and other problems that could be solved with a constraint programming toolkit. Although the solution of these problems is of vital importance, constraint programming toolkits are not widely used because there is insufficient expertise available to model problems as constraint programs.

This so-called modelling bottleneck could be reduced by the development of a general, principled understanding of modelling that in the future could guide the manual or automatic formulation of models and the choice among alternative models.

Researchers and practitioners have developed effective models for a wide range of problems. The time has come to form generalisations from these case studies that can be used to guide modelling in the future. These generalisations could then be systematised for use by a non-expert and be codified in textbooks in much the same way that data structuring expertise is. Ultimately this modelling expertise could be embedded in automated modelling tools. Progress on any of these fronts would bring the proven power of constraint programming to a wider user base.

This “Fifth International Workshop on Constraint Modelling and Reformulation” was convened to provide a forum for researchers who share these goals. This volume contains eight contributed papers.

We wish to thank all the authors who submitted papers to the workshop, the members of the programme committee and reviewers, and the CP 2006 Workshop Chair, Barry O’Sullivan.

Ian Miguel and Steve Prestwich
Programme Chairs

Programme Committee

Marco Cadoli, Universita di Roma "La Sapienza", Italy.
Alan Frisch, University of York, UK.
Brahim Hnich, Izmir University of Economics, Turkey.
Jimmy Lee, Chinese University of Hong Kong, China.
Ian Miguel, University of St Andrews, UK.
Steve Prestwich, University College Cork, Ireland.
Paul Shaw, ILOG SA, France.
Peter Stuckey, University of Melbourne, Australia.
Mike Trick, Carnegie Mellon University, USA.

Additional Reviewers

Tom Kelsey, University of St Andrews, UK.
Yak Law, Chinese University of Hong Kong, China.
Olivier Lhomme, ILOG SA, France.
Peter Nightingale, University of St Andrews, UK.
Jean-Charles Regin, ILOG SA, France.

Table of Contents

Mining Historical Data to Build Constraint Viewpoints.....	1
<i>C. Bessiere, J. Quinqueton, G. Raymond</i>	
Strategic Constraint Satisfaction Problems	17
<i>C. Bessiere, G. Verger</i>	
Why ESSENCE? Frequently Asked Questions about a New Language for Specifying Combinatorial Problems	30
<i>A.M. Frisch, M. Grum, C. Jefferson, B. Martinez-Hernandez, I. Miguel</i>	
The Automatic Generation of Redundant Representations and Channelling Constraints	42
<i>B. Martinez-Hernandez, A.M. Frisch</i>	
Consistency Reasoning for Removing Constraints and Clauses	57
<i>S. Prestwich</i>	
Improved Models for Graceful Graphs	65
<i>J-F. Puget, B.M. Smith</i>	
Generalizing Global Constraints Based on Network Flows	74
<i>I. Razgon, B. O’Sullivan, G. Provan</i>	
Exploring the Canopy of Constraint Modeling Languages	88
<i>R. Soto, L. Granvilliers</i>
